**Research outcomes of experiments conducted:**

Title OF EXPERIMENT	YEAR	RESULTS ACHIEVED
Technology of whey based mango beverage	2011	A very good quality mango based whey beverage prepared by using 0.1 ml. essence in 100 ml. mango whey drink, 10 per cent sugar and 0 days storage period.
Utilization of Burr Grass (Andropoagan taniger) in cross-bred heifers.	2006-07	The feeding of Burr Grass (Andropoagan taniger) to the growing heifers is good as compared to control feeding. The feeding cost was very low in Burr grass fed group as well as it has no ill effect on the growing heifers.
Impact of feeding of different level of Phosphorus and Manganese on the	2012-13	Application of Phosphorus and Manganese in the diet of broiler chicks improved the growth rate without affecting feed

growth performance of broiler chicks		consumption maximum body weight gain was found in 0.4% Phosphorus and 65 mg Manganese/kg/day. FCR was not found significant among the group. Therefore supplementation of phosphorus and Manganese is necessary for improvement of growth and simultaneously to economic the broiler production.
Effect of fat and sugar level on yield and Physico-Chemical quality of Srikhand	2011-12	On the basis of sensory and chemical quality of buffalo milk srikhand samples prepared from 6% fat and 40% sugar was found to be better.
Effect of herbal antioxidant supplementation on the performance of broiler chicks	2012-13	Application of herbal antioxidant supplementation (Aonla, Tulsi & Satavari) in the diet of broiler chicks improved the growth rate and did not show any effect on feed consumption .and did not show any effect on feed consumption .and did not show any effect on feed consumption .Aonla 1% were found best as compared to Satavari and Tulsi.
Utilization of paddy straw in cross-bred cows	2006	During winter season farmers facing high price problem of wheat straw and it must be increases cost of milk production. So farmers are used paddy straw as a dry fodder in the winter season. It has been observed that the animal fed paddy straw alone facing chronic deficiency of mineral constituents such as Calcium and Phosphorus etc. The deficiency is attributed to the salts of oxalic acid present in paddy straw. These Oxalic acid effect can be reduced to a spectacular degree by paddy straw treated with alkali or urea. Paddy straw treatment with alkali or urea is costly as well as time taking methods. Thus considerable bulky straw fodder from paddy crops in wasted annually in the form of litter if this colossal loss is not arrested and paddy straw is not utilized successfully as cattle feed the farmer problem is likely to be aggravated further. Berseem was chosen for the mixture being a rich source of nutrients and its availability in huge quantities at a time when fresh paddy straw is available a lot.6+1 kg berseem and paddy straw was found to be best as comparatively alone feeding of Paddy straw .
Replacement of concentrate mixture with berseem	2008	The feeding of berseem forage to the milch animal is good as compared to control feeding. Because the feeding cost of cross-bred cows are very low in the green berseem fed group as well as has no adverse effect on the milk production in crosso-bred cows.
