About the Moringa

According to WHO Malnutrition refers to deficiencies, excesses or imbalances in a person's intake of energy and/or nutrient Malnutrition is a common, under-recognised and undertreated problem facing patients and clinicians. It is both a cause and consequence of disease and exists in institutional care and the community. Moringa, a native plant from Africa and Asia, and the most widely cultivated species in North-western India, is the sole genus in the family Moringaceae.

The leaves of *Moringa* are mostly used for medicinal purposes as well as for human nutrition, since they are rich in antioxidants and other nutrients, which are commonly deficient in people living in undeveloped countries. Moringa play enthusiastic role to eradicate in malnutrition. Moringa value added products have put nutritive value with high acceptability. Moringa products took so many trial to manage, taste appearance and health, the main challenge is to get right products with no compromise with nutritive value. These products have effective to address the micro nutrients deficiency. In this direction many researches on Moringa fortified products initiated in the department since last few years. In this continuation different Moringa value added products viz Moringa Pasta, Moringa Biscuits, and Moringa extruded products developed under the minor research programme.
