

About the Society

Soil Conservation Society of India was registered during 1952-53 under the Societies Registration Act of 1860. The Society mandate is to the welfare of farmers and the rural people whose livelihoods are associated with the management of natural resources. It works for the cause of conservation, development, management and sustainable use of the soil, water, land and associated resources of plants and animals. The society has state chapter in different states of India and also publishes its quarterly Journal of Soil and Water Conservation. The society organise National Conference every year and an International Conference every four years.

About Host University

The Chandra Shekhar Azad University of Agriculture & Technology, Kanpur is recognized today as the premier institution of agricultural education, research and extension in India. The present status of the University was attained through phases of growth of its constituent colleges. At present, there are nine colleges in the University, viz., College of Agriculture, College of Forestry, College of Horticulture and College of Community Science at Kanpur, College of Engineering & Technology, College of Dairy Technology and College of Fisheries at Etawah, College of Agriculture at Lakheempur and Hardoi. The University caters to the needs of the farming community spread over 22 districts of five divisions of Uttar Pradesh.

About the Conference

Soil and Water are indispensable for the existence and survival of all terrestrial life. These are the basic resources to obtain food, feed, fuel and fibre for human beings, animals and living organism. Worldwide, around 52% of total productive land has been degraded by various kinds of degradation processes and almost 80% of the terrestrial land is affected by water erosion. Further, annually 10 mha of crop land becomes unproductive at the global level due to soil erosion with an average rate of 30 t/ha/year soil loss. Moreover, climate change will increase water demand globally by about 40% of the water needed for irrigation. Hence, under the emerging scenario of acute water shortages and land degradation, we must focus our efforts on the development and adoption of efficient approaches for soil and water conservation as well as for agricultural sustainability. The theme for World Soil Day-2023 was "Soil and Water: A Source of Life" our future. To fulfil the demand over 95% our food originates from these two sources. Hence, the holistic management of soil and water resources is need of hour for agricultural sustainability as well as for the protection of the natural ecosystem.

Developing an interface among academicians, researchers, government departments, policymakers, farmers, industries and other stakeholders will be useful to prepare the road map for soil, water and energy management for sustainable agriculture and livelihood security and hence National Conference is being organized encompassing the following themes:

Themes of the conference

1. Soil resource conservation and management for achieving sustainable development goals
2. Water harvesting and its efficient management in the farming system
3. Resource conservation technologies for sustainable agriculture, forestry and livelihood security
4. Climate-smart, digital agriculture, use of AI, IoT and machine learning for enhancing agricultural productivity and income.
5. Site-specific nutrient management for resource conservation and higher productivity
6. Utilization of new & renewable energy for sustainable soil and water management
7. Women empowerment and community involvement in agriculture
8. Government policies, natural and organic farming for sustainability
9. Farmers' Rights in India; PPVFR Act 2021
